

Updates from West Virginia for MAWWG

- New Staff & Training
- Monitoring & Mapping
- Public Outreach

Presented by Sara Miller and Kylie Joins
WVDEP Watershed Assessment Branch

New Staff (please welcome Kylie Joins!)

Staff Training

- Hydric Soils Workshop September 20th with NRCS and USFS in Elkins, WV
- Watershed Assessment staff training April 13th, 7 DEP staff completed 3-day training, 6 completed regulator 2-day training, WVWRAM cross-training on-going

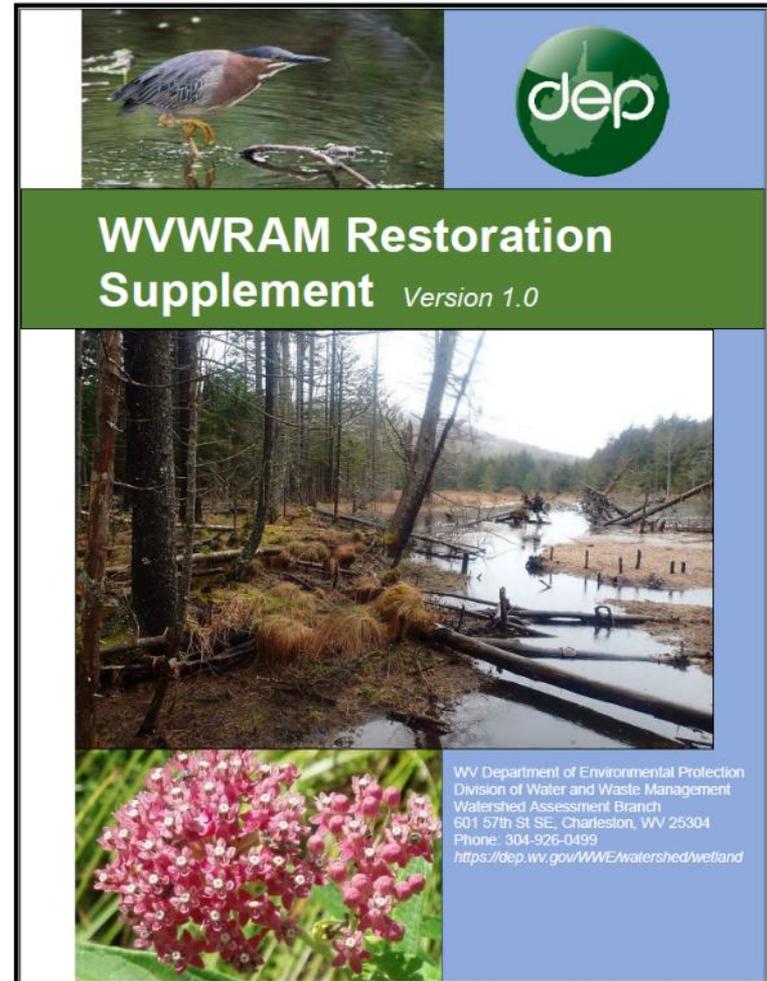

Support for the Regulatory Rollout to Wetland Functional Assessment

- Regulator trainings (3) and User Trainings (4)
 - WWWRAM Training for Regulators: Feb 22 & 28, Aug 22-23
 - WWWRAM User Trainings: Apr 25-26, May 9-11, Jul 25-27

Support for the Regulatory Rollout to Wetland Functional Assessment

- WVWRAM Restoration Supplement
- Performance Standards for Mitigation Banking, draft

The image shows the cover of a report titled "WVWRAM Restoration Supplement Version 1.0". The cover features a blue background with a green horizontal band across the middle. The top left corner has a photograph of a green heron standing in water. The top right corner has the 'dep' logo. The middle green band contains the title "WVWRAM Restoration Supplement" in white, with "Version 1.0" in a smaller font to the right. Below the title is a photograph of a stream flowing through a wooded area with fallen logs. The bottom left corner has a close-up photograph of pink flowers. The bottom right corner contains contact information for the WV Department of Environmental Protection, Division of Water and Waste Management, Watershed Assessment Branch, located at 601 57th St SE, Charleston, WV 25304. The phone number is 304-926-0499 and the website is <https://dep.wv.gov/WWE/watershed/wetland>.

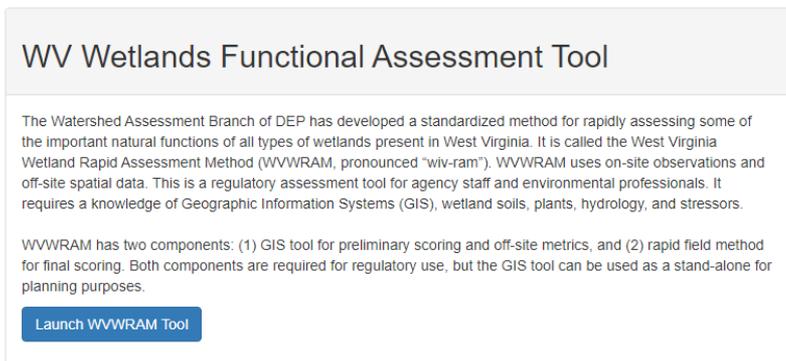

Probabilistic and Restoration Monitoring

- Probabilistic: completed year 4!
- Sampling goals were reduced due to training this year: 20 probabilistic, 3 restoration
- Total sites attempted: 51 (16 no access)
- Probabilistic sites sampled: 20
- Restoration sites sampled: 8
- Training sites: 7

Method

West Virginia Wetland Rapid Assessment Method (WVWRAM)

- WVWRAM combines two elements: Field Assessment + GIS
 - Field Assessment: data collected for buffers, topography and structure, hydrology, stressors, soils, and vegetation
 - GIS: shapefile of field mapped, attributed wetland polygon submitted to GIS Tool, which returns excel file with preliminary scoring

WV Wetlands Functional Assessment Tool

The Watershed Assessment Branch of DEP has developed a standardized method for rapidly assessing some of the important natural functions of all types of wetlands present in West Virginia. It is called the West Virginia Wetland Rapid Assessment Method (WVWRAM, pronounced "wiv-ram"). WVWRAM uses on-site observations and off-site spatial data. This is a regulatory assessment tool for agency staff and environmental professionals. It requires a knowledge of Geographic Information Systems (GIS), wetland soils, plants, hydrology, and stressors.

WVWRAM has two components: (1) GIS tool for preliminary scoring and off-site metrics, and (2) rapid field method for final scoring. Both components are required for regulatory use, but the GIS tool can be used as a stand-alone for planning purposes.

[Launch WVWRAM Tool](#)

Method

- Additionally, WQ samples: probabilistic sites only, where surface water present, lab analysis of Al, Fe, Mn, Alkalinity, Chloride, Sulphate, TSS, Total Nitrogen, and Total Phosphorous, in-situ readings for pH, DO, Temp, and Specific Conductivity.
 - “Almost no significant correlation between wetland condition and WQ to date” – Elizabeth Byers
 - WQ sampling will be reevaluated after year 5

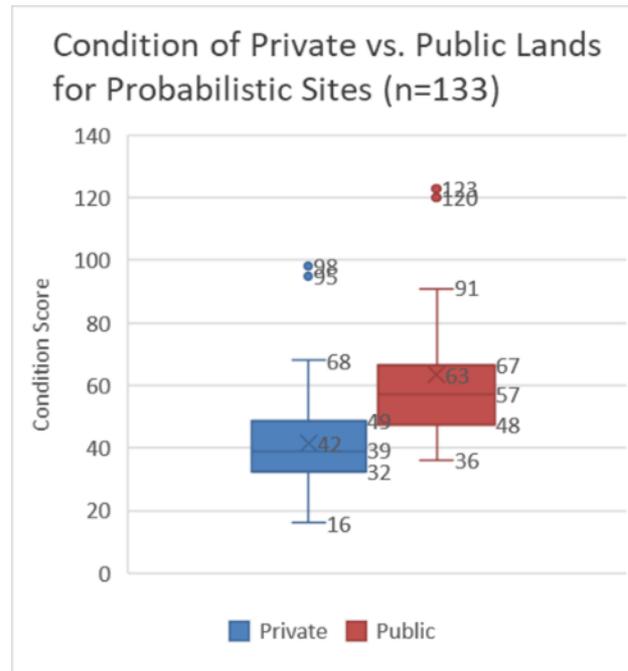

Probabilistic Monitoring

- Importance of 5-year baseline
 - Monitoring samples vary from year-to-year depending on staff availability
 - COVID, 2020 – largest number of samples
 - Training for regulatory rollout and turnover – lower numbers of samples

Probabilistic Monitoring 2023

- Refusal/no access on private lands @ 44%
- Additional effort continues to be made for private land access
- Reformatting letter to landowners for increase response
- Only sampling public lands wouldn't be representative of overall state wetland condition in WV

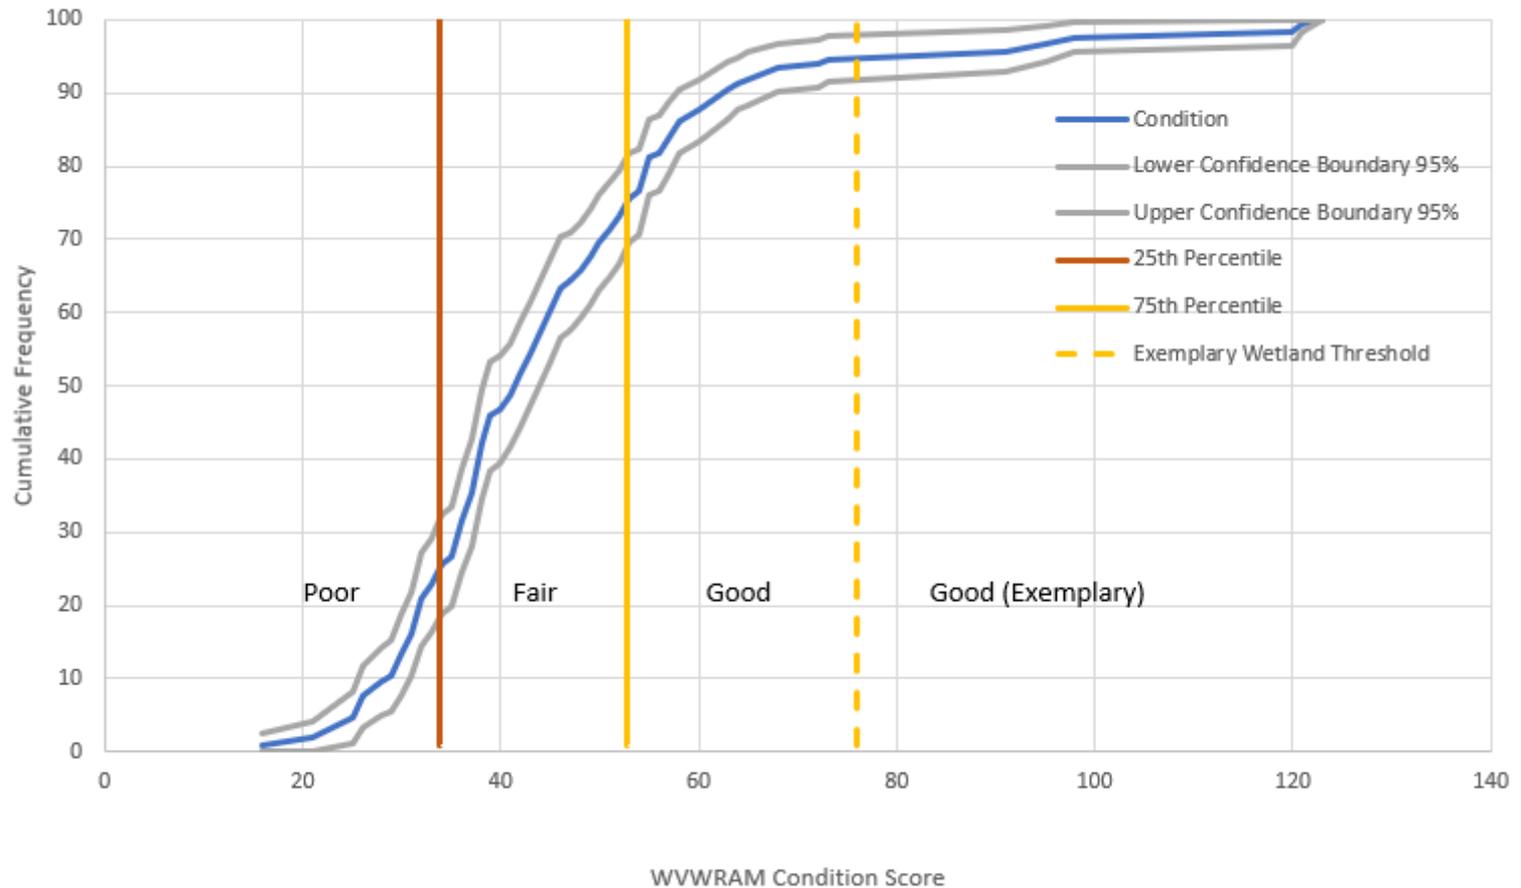

Monitoring

- Using 116 probabilistic samples as of 2022 season
- Calculated Cumulative Distribution Function of WVWRAM Condition Score. Best professional judgment to set thresholds set at 25% and 75%, with Exemplary sites above the 95th percentile (>76).
- Bias toward public land due to difficulty in accessing private
 - Private land sites are weighted more heavily in the CDF, with the resulting weight being about 1.6x that of public lands

	Poor (below 25th percentile)	Fair (25th - 75th percentile)	Good (above 75th percentile)	Exemplary
Overall Condition	0-34	35-53	54-76	>76

Cumulative Distribution Function of WWRAM Condition (n=116)

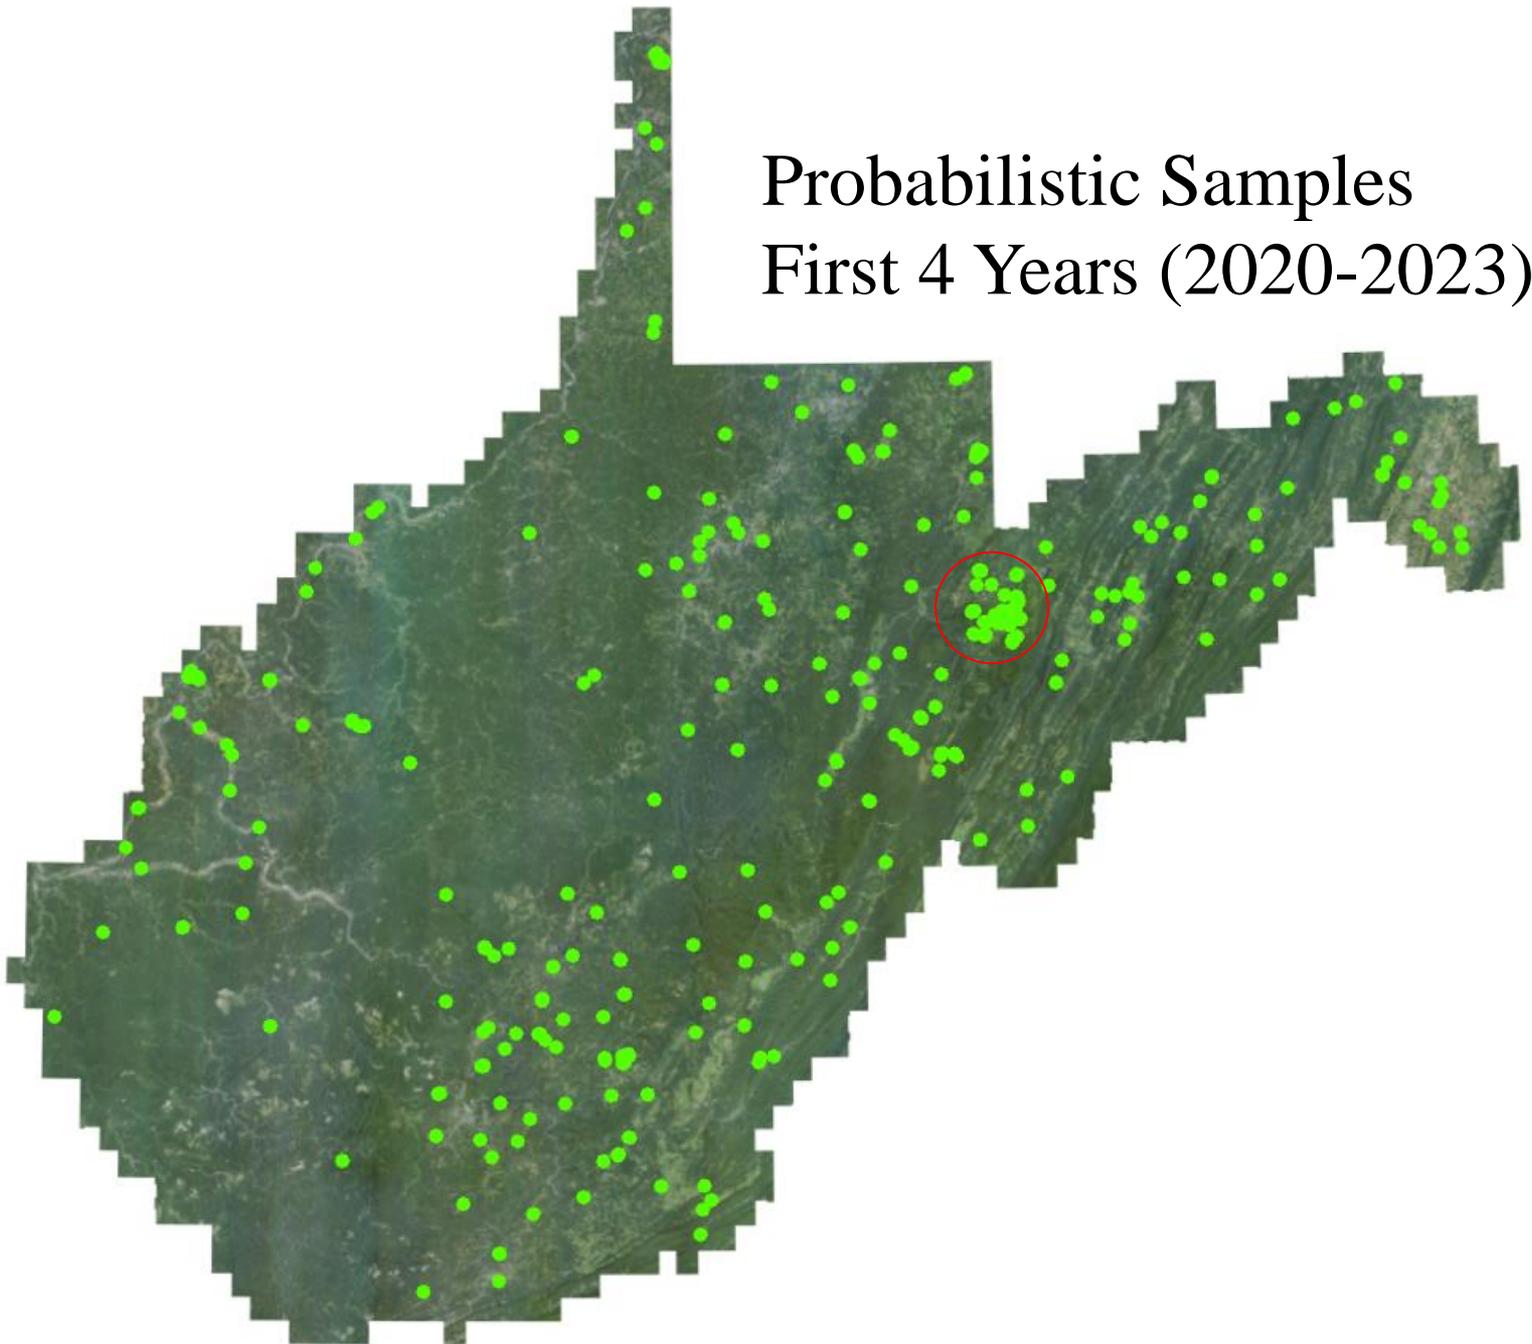

Probabilistic Monitoring: Next Steps

- Next steps:
 - Complete year 5 probabilistic monitoring to acquire baseline
 - Jan-Mar 2025: New draw with help from EPA
 - Next 5-year cycle monitoring
 - Next 5 years of monitoring to compare to baseline

Probabilistic Samples
First 4 Years (2020-2023)

Notable Sampling Locations - 2022

Horseshoe Fen at Left Fork/Red Creek

Little Blackwater River South

Notable Sampling Locations - 2023

Peatland and Woodland on North Fork/Blackwater River

Notable Sampling Locations - 2023

Glade Run Southwest Beaver Complex and Shrub Swamp

Regional Monitoring Network (RMN)

- Long-term monitoring at high-quality reference wetland: Big Glade in Cranberry Glades Botanical Area
- Partners: US EPA, WVDNR, USFS, and NRCS

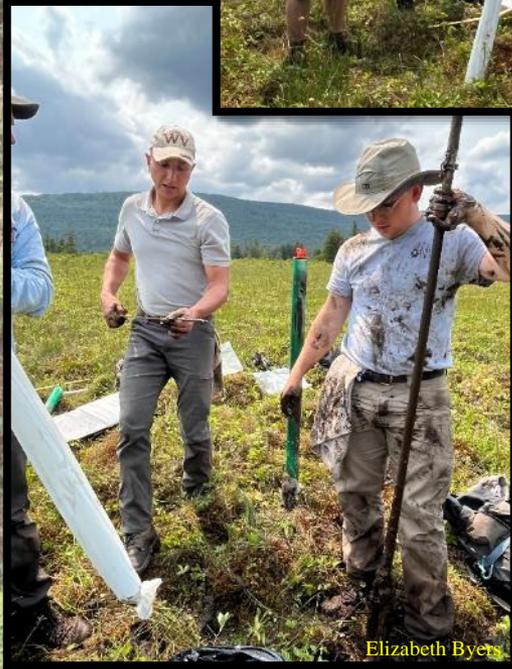

Regional Monitoring Network (RMN)

- Two rounds multi-spectral drone imagery have been acquired (2020 & 2023)
- Vegetation data collections in June and August 2023 to be used in classification of drone imagery (157 occurrences, 234 locations) → baseline vegetation maps
- Three wells + 1 piezometer installed August 1, 2023 with level loggers (monitored quarterly)
- Soil profiles at ea. site described by NRCS

Big Glade, Cranberry Glades Botanical Area

NWI Mapping

- Updating wetland maps for 47 counties
 - Northern 23 counties
 - Contract awarded to Ducks Unlimited
 - Southern 24 counties
 - Contract awarded to St. Mary's University
 - Drafts have been reviewed by WVDEP and are to be submitted to the NWI for final checks
 - Will be served to the public on the USFWS Wetlands Mapper website

Public Outreach – Twin Falls SP

- Fact sheets, videos, and on-site signage for 12 featured WV wetlands

Twin Falls State Park Fact Sheet

Public Outreach 2023

- Vernal pool monitoring workshops (5), with 102 participants.
- iNaturalist “Vernal Pools of West Virginia” with 75 observers and 177 observations

iNaturalist

Vernal Pool Monitoring Continued

Vernal Pool near Upper Shavers Fork of the Cheat, Randolph County, West Virginia

DEFINING A WILD & WONDERFUL WETLAND

In West Virginia, wetlands have water at or near the soil surface.

Air-filled stems act like snorkels to bring oxygen to the roots.

Slots in the bark help woody stems breathe.

Dark organic soil often accumulates in saturated wetland conditions.

AQUATIC BED **EMERGENT WETLAND** **SHRUB WET**

WETLAND LOCATIONS

There is no shortage of wetlands to visit in our Mountain State. To highlight West Virginia's wetland diversity, short videos and fact sheets have been created for 12 wetlands. Scan the QR code below to learn more!

Visit the wetland near you or check out all 12!

41

FORESTED SWAMP

Species Highlight

Did you know that rhododendrons are also nature's thermometer? Tell the temperature by looking at their leaves. Are they flat or curled?

Great Rhododendron

Rhododendron is West Virginia's state flower. It is also a beautiful pollinator in our wetlands, attracting butterflies and hummingbirds to feed on its nectar. It grows in acidic soils, moist dry forests, and in swamps.

>40°F Flat Leaf

25°-40°F Curled Leaf

<25°F Tightly Curled Leaf
